

Deliver optimized software swiftly and securely via simplified multi-cloud operations

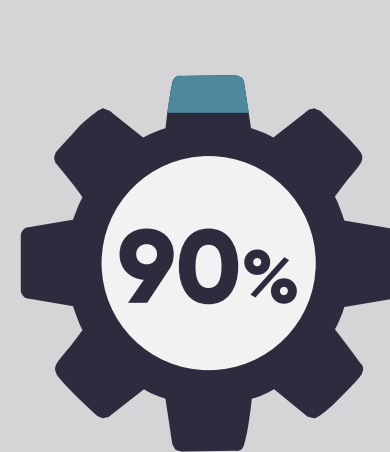

Faster app release time¹

More efficient operations²

More time to spend coding³

Faster environment provisioning⁴

Modernize at your own pace
 Creating a centrally managed, unified model for your clouds, clusters and applications, VMware Tanzu provides self-service DevOp-ready infrastructure, while granting IT teams observability and workload troubleshooting.

Key Benefits

Enable agile operations
 a secure, scalable, accessible, and cost-effective multi-cloud infrastructure ensures high performance.

Ship software faster
 automate the path to production with swifter release cycles utilizing a supply chain of frameworks, services, and opensource tech.

Migrate when you're ready
 optimized portability empowers migration to different clouds as operational needs change.

TeraSky's Acknowledged Expertise
 Having successfully undertaken numerous SDDC (software-defined data center) migrations for companies worldwide, TeraSky supports your VMware Tanzu implementation all the way through deployment and onboarding.

#1 VMware 2021 Partner of the Year

2 HOURS The implementation of a managed SDDC takes less than two hours, ready for payload migration

7 One of only a few companies worldwide to achieve all seven VMware master-level certifications

100% Increase in online activity after TeraSky's upgrade for one of Europe's largest financial institutions

Beat Tech Complexity and Stay Ahead of the Curve
